

SIMPLIFYING ONTIME PRODUCT CODES

OnTime will initiate new product codes in 2010 for all range of its products.

The main purpose for this codes transition is aim to integrate all the products with similar character under same code prefix and make it more easier and direct for client to understand OnTime products and service portfolio.

Considering the current practice with former product codes, OnTime will keep both new product codes (e.g. OS0002) and former ones (e.g.OT853) in our 2010 catalogue and will accept purchasing orders with both new and former codes from clients in 2010. But OnTime greatly recommend clients to use new product codes and abolish the former ones gradually since the releasing of our new 2010 catalogue.

The OnTime simplified product code architecture proves we are listening to customers who want to make doing business easier. This new approach is outside-in, meaning customers will no longer have to sort through a myriad of product codes to locate the right products. This also enables OnTime to better position ourselves as a leader in convergence by removing barriers caused by product codes' insufficiency.'

Zhuang Xiaodong / General Manager

FORMERLY KNOWN AS	NEW CODE	AN ABBREVIATION OF
OT	OS 00**	Operation System
